

The latest online content from aeSolutions, an integrated lifecycle partner in process safety, automation and fired equipment.

Integrating PHA LOPA Outputs into Effective SIS Engineering

We can help you pick up your PHA/LOPA, which may have been put to the side, and set you up for the safety system design phase. Standard SIS deliverables include the review of specification, confirming that the SIL levels are what they should be, and that the proof testing procedures are correctly documented to support your regular testing intervals.
